SUMMARY

Computer Science undergraduate with strong foundations in Data Structures and Algorithms and experience in building Generative AI applications using large language models, embeddings, and Python-based frameworks. Seeking an AI/ML Engineering Intern role with a focus on Generative AI.

EXPERIENCE

EduLinkUp

Remote

AI/ML Intern — Generative AI (LLMs, APIs, Vector Databases)

Jan 2026 – Feb 2026

- Worked hands-on with Large Language Model (LLM) APIs, prompt engineering, and modern AI workflows.
- Build and experimented with Generative AI systems using vector databases for semantic search and retrieval.

PROJECTS

Vayu – Interactive Face Recognition Bot | Python, OpenCV, DeepFace (Facenet512), FAISS, SQLite, Sarvam AI

- **Vayu**, a real-time AI booth assistant for a college fest (JIIT Converge'26) that identifies attendees via FAISS-based cosine-similarity search over Facenet512 face embeddings and delivers fully personalized spoken responses using a conversational pipeline.
- Built an end-to-end voice pipeline (Sarvam AI Speech-to-Text → LLaMA 3.3-70B → Sarvam AI Text-to-Speech over WebSocket) with streaming audio playback that begins speaking within 0.4 seconds of the first audio chunk arriving.
- Engineered concurrent execution using Python's **ProcessPoolExecutor** to run face recognition in an isolated process alongside live camera capture (OpenCV) and a Silero VAD audio thread, ensuring smooth, non-blocking operation.

Spy AI | Flutter, FastAPI, Dart, Python, Gemini, PostgreSQL

- **Spy AI**, an AI-powered full-stack mobile app using **Flutter** (Dart) frontend and **FastAPI** (Python) backend that turns your phone into a searchable, lifelong memory by recording and indexing meetings in real time.
- Implemented a background recorder with real-time audio capture, transcription pipeline, structured database storage and **full-text search**; integrated an **LLM-driven chatbot** to surface summaries, exact quotes, timestamps and context on demand across past conversations.

Stock Market Voice | Python, Sarvam AI, Groq, Twilio, Silero VAD

- **Stock Market Voice**, is an AI-powered voice calling system for brokers that schedules and initiates automated calls to clients, delivering personalized daily stock purchase summaries with real-time conversational interaction.
- Built an end-to-end voice pipeline (Sarvam AI Speech-to-Text → Groq LLM → Sarvam AI Text-to-Speech) integrated with Silero VAD for speech detection, enabling low-latency, human-like dialogue over calls.
- Integrated Twilio for scalable call automation and broker APIs for dynamic retrieval of client-specific stock data, supporting multi-user calling and seamless callback-based query handling.

EDUCATION

Jaypee Institute of Information Technology

Noida, India

B.Tech. in Computer Science and Engineering

2024 – 2028

TECHNICAL SKILLS

Programming Languages: Python, Java, Dart, C, C++

Frameworks: Django, FastAPI, Flask, Flutter, Spring Boot

Databases: PostgreSQL, MySQL, MongoDB

AI/ML: Machine Learning, LangChain, LangSmith, LangGraph, CrewAI, RAG

Tools: n8n, GitHub

ACHIEVEMENTS

Keplay Certified

August 2025

- Ranked among the top 168 finalists (top 0.99%) from 18,000+ participants in the Keplay API Fellowship Program, earning certification through consistent performance across all stages.

LEADERSHIP & TECHNICAL COMMUNITY INVOLVEMENT

Google Developer Groups – JIIT 128

Sep 2025 – Present

Core Team Member

IEEE Student Branch JIIT Noida

Jul 2025 – Present

Tech CSE Volunteer - contributed to technical workshops and developer events
